ADB Support to promote CBET in South Asia

ADB support to promote regional energy cooperation in South Asia

SAARC Regional Energy Trade (SRETS), 2005-2010

Study on South Asia Regional Power **Exchange (SARPES), 2011-2013**

Study of the SASEC Electricity Transmission Master Plan (SETMAPS), 2014-17

Objective

Regional trade and cooperation agreement, roadmap for harmonization of legal & regulatory frameworks

Alternative financing mechanisms for regional projects, institutional roles

Objective

Green-field interconnection possibilities within SAARC region till 2020, draft market rules for regional power trade and exchange, recommendations for regulatory framework compatibility

Objective

Develop the regional crossborder electricity transmission plan Also considered the regional generation plan (conventional and RE) and evacuation requirements

ADB has financed several regional and interconnection projects in South Asia, e.g. the Dagachhu and Nikachhu hydropower projects in Bhutan, India-Bangladesh interconnections, etc.

ADB is also providing support to the SAARC Council of Experts of Energy Regulators (CEERE) on various regulatory coordination issues related to implementation of the SAARC Framework Agreement

ADB Regional TA to support SASEC member nations in enhancing power trade in the region

Key Objective: Enhancing regional cooperation in energy sector among the member nations in accordance with the SASEC vision and SASEC operational plan

Activities to be carried out under the TA

Regional Project assessments

Feasibility, costing, safeguards, project benefits

Developing a regional master plan

Update the master plan prepared under SETMAPS

Capacity Building through knowledge sharing workshops

Support CEERE in conducting studies for operationalisation of SAARC Framework Agreement Regional Framework for Energy Cooperation Enable members to participate in regional power market

Progress achieved under the TA

- Work towards signing of Regional Power Trade Framework Agreement for increased regional cooperation among SASEC nations
- Assessment of project development options and preliminary viability analysis of various regional flagship projects
- Knowledge sharing on "Best practices on on Cross-border Electricity Trade and Regulatory Cooperation" in the 3rd and 4th CEERE workshop in Colombo

ADB support to facilitating CBET through SASEC Power Trade Working Group (SPTWG)

Objective

Facilitating increased cross border power trade among member countries through development of regional projects and suggest measures to overcome challenges w.r.t multi country power trading

To work in coordination and complement the activities of other groups e.g. SAARC Energy Centre/ SAFIR etc

Key Responsibilities

Assist in mobilizing funds for priority projects

- Discussions on project development options
- Scouting potential funding sources

Facilitate discussions among planning agencies, regulators and utilities

 Support in identifying issues with respect to regulatory/policy/ commercial, etc.

Capacity Building & Knowledge Management

 Oversee studies and share best practices on policy, regulatory, technical and commercial/ financial aspects

Maintain and update SASEC priority projects

 Review progress and support in identifying key issues/ challenges

South Asian Power Sector Overview

Opportunities to leverage complementarities in SAARC power sector through regional cooperation

SAARC Power Sector Scenario

Countries	Installed Capacity (MW)	Peak Demand (MW)	Per Capita Electricity Consumpti on (kWh)	Power Import (MW)	Power Export (MW)
Afghanistan	520	600	149	-	-
Bangladesh	21,000	14,500	336	1,160	-
Bhutan	2,326	400	2,976	-	~2,300
India	3,63,000	1,78,000	1,208	~2,300	~1,660
Maldives	400	-	725	-	-
Nepal	1,177	1,320	190	~500- 520	-
Pakistan	36,010	25,000	435	1,000	-
Sri Lanka	4,103	2,616	658	-	-

- Wide variety of generation sources across the sub-region
- Dominance of single energy source for power generation in most of the member countries
- Cost of generation and supply widely varies across the SA nations with countries like Nepal & Bhutan having access to cheap hydro power and India having access to abundant renewable energy
- Member nations have time (peak/offpeak) and seasonal complementarities which may be leveraged through regional co operation
- Scope for channelizing revenue from power export for socioeconomic development
- Scope for reducing carbon footprint (increasing RE penetration) opportunity to support fluctuation from RE with traditional sources

Need for a regional framework agreement to develop energy resources ,meeting electricity demand and enhanced economic benefits for the SAARC region

SAARC Framework Agreement for Energy Co-operation(Electricity)

SAARC Framework Agreement for Energy Cooperation (Electricity) was first signed in 2014 at the 18th SAARC Meeting .The member nations are Afghanistan, Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan and Sri Lanka

<u>Objective:</u> Enable cross-border trade of electricity on voluntary basis subject to the laws, rules and regulations of the respective Member States

Salient Features of the SAARC Framework Agreement

Non-discriminatory access to transmission grids for the purpose of CBET

International coordination in transmission interconnection planning, system operations, and energy accounting Promotion of information sharing between Member States

Encouraging member states to undertake power sector reforms in their respective jurisdictions, to promote competition

Member states to develop structure functions and institutional mechanisms to resolve regulatory issues

- > SAARC Framework Agreement has been ratified by all member states except Pakistan
- > Multilateral/trilateral trade is yet to be established among SAARC member nations

Barrier and Challenges for implementation of framework agreement for CBET

- Limited competitive pricing regime for cross border trade
- No uniform transmission pricing framework

• Multiple decision making layers

• Lack of Member Nation Focal Point integrated in organisation structure of SAARC

Institutional Challenges

- Lack of common operational guidelines
- Congestion Management
- Energy Accounting, settlement etc

- Lack of harmonisation of technical regulation
- Transmission Access & Planning

- Lack of clear roadmap for unified SAARC Power Exchange
- Lack of Open Access
 Regulation across Member
 States

Technical Challenges

Existing Issues/Challenges among SAARC nations 1/3

Technical Challenges

SAARC Framework Agreement

<u>Article 7 Planning of Cross-border</u> interconnections:

Enable the transmission planning agencies of the Governments to plan the crossborder grid interconnections through mutual agreements between the concerned states

Article 8: Build, Operate and Maintain:

Enable the respective transmission agencies to build, own, operate and maintain the associated transmission system of crossborder interconnection falling within respective national boundaries

Current Status

- Currently only Bilateral transmission arrangements exist
- There is lack of regional transmission planning and project implementation to optimize investments on a regional level
- National institutions drives development of inter-connections
- Cross border inter-connections planned on a case-to-case basis

Challenges

No guidelines available in transmission planning for trilateral/multi country power trade

No guidelines or clarity for cross country investment

Absence of a regional transmission master plan

Existing Issues/Challenges among SAARC nations 2/3

Technical Challenges

SAARC Framework Agreement

Current Status

Challenges

<u>Article 10: Electricity Grid Protection</u> <u>System</u>

Enable joint development of coordinated network protection systems incidental to the cross-border interconnection No common grid code or network regulation. Each country guided by its national electricity laws/policies

Article 12:Transmission Access

Enable non discriminatory access to the respective transmission grids as per the applicable laws, rules, regulations and applicable inter-governmental bilateral trade agreements.

- Apart from India, open access framework is not operationalized in other SAC
- No open access required for power export for IND-NEP and IND-BAN as Nepal, Bangladesh are buyers.
- Bhutan has dedicated transmission lines for export of power

Absence of harmonisation may lead to difficulties in system operation with proposed significant increase in power trade

Lack of open access regulation in SA countries will hinder access of transmission and distribution infrastructure to facilitate CBET

Technical Framework for regional cooperation in GMS region

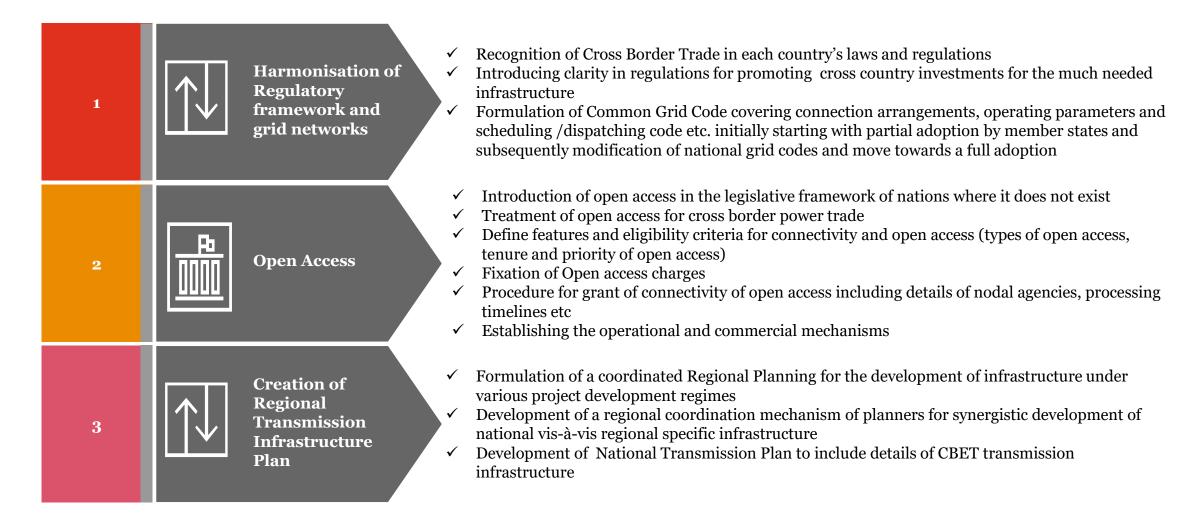

GMS program was started in 1992 with assistance of ADB RPTCC established as per Article 4 of the IGA signed in 2002

RPTOA, drafted by the RPTCC was approved in 2005 Working Groups established under RPTCC for project and market development aspects

Key Achievements till Date

- Roadmap on transmission pricing methodologies
- Technical assistance to countries on regulatory issues, i.e. transmission company, system operation, wheeling charges, etc.
- GMS performance standards adopted as a reference document in June 2016
- Regional transmission regulations adopted as reference document in Dec 2017
- Work in progress
 - Standard regional metering and communication arrangements
 - GMS Grid Code
 - Regional master plan and FS for priority interconnectors

Existing Issues/Challenges among SAARC nations 3/3 Addressing technical Challenges-Way forward

Commercial Challenges

Existing Issues/Challenges among SAARC nations

Commercial Challenges

SAARC Framework Agreement

Article 3 Scope

Member States may enable Buying and Selling Entities to negotiate the terms, conditions, payment security mechanism and tenure of electricity trade under the Government regulatory mechanisms of the concerned states

Article 9: Transmission Service Agreements

Member nations may facilitate entities to enter into TSA with transmission service Provider

Current Status

- For projects developed under Inter-Governmental Agreement, the tariff is determined through G to G negotiations
- Gradual evolution from G-G to commercial CBET (~30% of the power trade)
- Transmission pricing currently governed by bilateral TSA.
- Transmission pricing involving Indian & interconnected grid is done as per CERC regulations

Issues/Challenges

- Along with the prevalent G2G model for power sale, there is need for more commercial focus and competitive price discovery
- Need of standard framework for Transmission Charges/ Pricing
- Need for development of model/standard TSA
- Need for framing uniform guiding principles on transmission cost sharing /transit fee arrangement

Existing Issues/Challenges among SAARC nations 3/3 Addressing Commercial Challenges-Way forward

Competitive Pricing Discovery

2

Common Norms for transmission pricing, payment security, and other commercial terms

- ✓ Gradual transition from G-G bilateral arrangements to more competitive market driven arrangements
- ✓ Promotion of power trade through exchanges to improve price discovery and improve transparency
- ✓ Setting up principles and mechanism for determination of economically efficient transmission pricing mechanism and gradually introduce concept of local specific pricing
- ✓ Evolution of an appropriate transit fee mechanism with a possible start using cost plus principles

International Example: GMS

- Presently transmission methodology varies across countries; in case of using third country network wheeling charge for that country
 as well as system loss to be recovered through end tariff. RPTCC under GMS Secretariat presently working on common CBET
 transmission pricing methodology
- Methodologies agreed to enhance present postal stamp method prevalent in some countries of Greater Mekong Region for transmission pricing are
 - o Differentiation of charge by time of year to reflect hydrological variations
 - o Differentiation of charges by capacity and energy,
 - Introduction of charges to generators and consumers
- **Electricity Tariff** for power export and **wheeling charge** is determined as per bilateral PPAs. **Cost plus model** is used for determination of tariff

System Operation Challenges

Existing Issues/Challenges among SAARC nations

System Operation Challenges

SAARC Framework Agreement

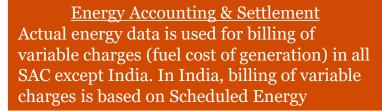

Article 11 System Operation and Settlement Mechanism

Member States shall enable the national grid operators to jointly develop coordinated procedures for the secure and reliable operation of the interconnected grids and to prepare scheduling, dispatch, energy accounting and settlement procedures for cross border trade.

Current Status (As-Is)

Schedule and Dispatch

• The National System Operators (NSO) are involved in each transaction for scheduling & despatch related activities

Congestion Management
In many SACs, congestion in transmission
system is typically managed either by
generation or load control. There is no specific
provision detailed for congestion
management in respective Grid Codes

Challenges

 Different procedures and timelines of different NSOs may creates issues in cross border transaction of power

 Lack of common procedure in energy accounting and settlement may lead to lack of transparency

 In the absence of a regional commercial mechanism for Congestion planning in advance, many times curtailment in transaction take place in CBET

Existing Issues/Challenges among SAARC nations Addressing System operation Challenges-Way forward

Scheduling & Dispatch

Formulation of common grid code to standardize operation and scheduling with pre defined timelines

Energy Accounting

- In case of multiple transmission interconnection points, it is envisaged that scheduling would be carried out separately for each transmission link through a defined procedure
- A separate commercial mechanism for imbalance settlement may be established

Congestion Management

Feasibility of implementing a commercial mechanism may be explored wherein, users causing congestion pay penalty and users relieving congestion receive incentive at predetermined rate

International Example: South African Power Pool

- Operating guidelines for SAPP issued in 2012. The areas covered are:
- System control: *Generation/voltage/time&freq.control,equipment*
- System security: *Active/reactive supply, relay coordination, connection & operation of IPPs*
- Emergency operation protocol: Over/under generation, load surge, load shedding, system restoration,
- Operating personnel: *Responsibility, training*
- Operations planning: Normal, short/long term emergency
- Telecommunications: Facility, controller

Institutional Challenges

Institutional Challenges amongst SAARC Nations Current Status and Challenges

SAARC Framework Agreement

Article 15: Regulatory Mechanisms

Member States shall develop the structure, functions and institutional mechanisms to resolve regulatory issues related to electricity exchange and trade

Article 16: Dispute Settlement

Dispute arising out of interpretation and/or implementation of this Agreement shall be resolved amicably among the Member States. If unresolved, the Member States may choose to refer the dispute to the SAARC Arbitration Council

Current Status

- Institutional structure of SAARC includes 7 layered organs
- SAARC Summits is the apex body governing the decision making
- Council of ministers from member states formulate and ratify the policies, regulations etc.
- Third layer is Standing Committee of Foreign secretaries responsible for approvals and overall monitoring and coordination
- The last 4 layers are responsible for implementation, monitoring and evaluation with allocation in a vertically hierarchical order

Challenges

Multiple layer operations and governance system prolonging the decision making and implementation process

Absence of Nodal Points from each member nation embedded in the organisational structure of SAARC

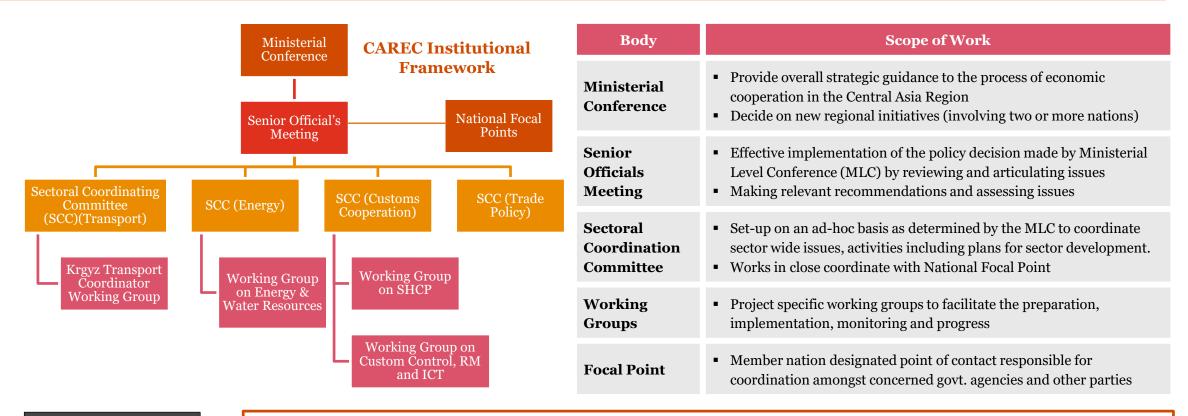

Institutional Challenges amongst SAARC Nations

As-is Situation of the SAARC Institional Structure

Order	Principal Organ	Key Features	Roles and Responsibilities
1	SAARC Summits	 Meetings of the Heads of State or Government of Member States Held biennially hosted by a Member State in alphabetical order 	 Declaration consisting of decisions and directives Approval of reports of the Council of Ministers
2	Council of Ministers	 Comprises Ministers of Foreign /External Affairs of the Member States CoM meetings conducted before the Summit and between two Summits CoM reports submitted to meeting of Heads of State or Government 	 Formulation of policies of the Association Review of progress of cooperation under SAARC Establishment of additional mechanism under SAARC
3	Standing Committees	 Comprises of the Foreign Secretaries of the SAARC Member States Standing Committee can meet ad hoc basis Conducted during Summit for CoM is convened in between two Summits 	 Overall monitoring and coordination of programme Approval of projects and programmes and mobilize resources Determination of inter-sectoral priorities
4	Programming Committees	 Comprising of the Heads of SAARC Divisions of Member States Meets prior to the meetings of the Standing Committee 	 Considers the Calendar of Activities Administrative and Financial Matters of the Secretariat
5	Technical Committees	 Comprises of 6 Technical Committees for SAARC activities Work on their respective areas to provide support to SAARC activities 	 Implementation, coordination and monitoring of programmes Formulation of programmes and preparation of projects
6	Working Groups	 Carry out the directives emanating from SAARC higher bodies Comprises of 4 Working Groups 	 Formulate and over see programmes and activities Coordinate, monitor and evaluate programmes
7	Action Committees	 Comprising of Member States concerned with the implementation of projects involving more than 2 but not all Members 	 Support in the implementation of project as a support to WG

Benchmarking with Other Regional Body from Asia

CAREC has relatively flatter and shorter hierarchy with only 4 layers of decision making bodies or organs which can facilitate expeditious resolutions and approvals

Way Forward

- Learnings can be taken from other international cases to simplify and flatten the hierarchy to expedite the decision making process
- Introduction of an additional external body viz. the nodal focal point from all the member nations which can act as single contact point for all coordination, monitoring, oversight and decision making purposes for pertinent project nations
- Structured institutional mechanisms/committees/forums at the level of regulators, planning authorities etc

Challenges in Regional Power Exchange

Regional Power Market Challenges amongst SAARC Nations

Existing Cross Border Power Trade between member nations

Source

Existing Bilateral Trade

Source	Туре	Trader	Tenure
250 MW NTPC	G-G	NVVNL	25 years

Ų				

Type

Emerging Trilateral Trade

900 MW Upper Karnali HPP

The Cabinet Committee on Public Purchase (CCPP) in Bangladesh has approved a proposal for importing about **500** MW electricity from the proposed **900** MW Upper Karnali Hydroelectricity Project being developed by GMR in Nepal.

1125 MW Dorjilung Project

Bhutan, Bangladesh and India intend to propose 1125 MW Dorjilung project as a trilateral project. The DPR of the project has been approved by RGoB. Transmission interconnectivity options between Bhutan and Bangladesh through India is being currently explored

Bangladesh PSMP 2016

Bangladesh proposes to import >5 GW of hydropower from Bhutan, Nepal and Myanmar

Regional Power Market Challenges amongst SAARC Nations...(1/2) Current State of Affairs to Progress towards Regional Power Market

SAARC Framework Agreement

Article 15: Regulatory Mechanisms

Member States shall develop the structure, functions and institutional mechanisms to resolve regulatory issues related to electricity exchange and trade

Article 16: System Operation and Settlement Mechanism

Member States shall enable the national grid operators to jointly develop coordinated procedures for the secure and reliable operation of the inter-connected grids and to prepare scheduling, dispatch, energy accounting and settlement procedures for cross border trade.

Current Status (As-Is)

Phase – I (Bilateral Power Trade)

This phase aims at establishing bilateral trade connections between member nations.

Currently most of the CBET ties amongst

SAARC nations is in Phase-I

Phase-II (Trilateral Power Trade)

This phase is gradual progress towards
Trilateral/Quadrilateral connections to
establish trilateral market setup in the region.
SA region is slowly transitioning towards
trilateral trade with joint initiatives e.g. GMR
Upper Karnali Project, Dorjilung Hydro
Power Project

Potential Status (To-Be)

Phase – III (Sub Regional Power Market)

The subsequent phase post trilateral market ties would be development of sub regional grids & subregional power markets which would lead to formation of clustered market within regions sharing common operating and technical standards

Phase – IV (Harmonized Regional Power Market)

Final phase is unification of sub-regional power markets or sub-regional clusters and formation of an integrated grid and common market pool with harmonised grid standards

Regional Power Market Challenges amongst SAARC Nations...(2/2) Current State of Affairs to Progress towards Regional Power Market

Challenges

Lack of clear roadmap for governing the transition of CBET from Bilateral to Trilateral/Multilateral

Lack of strategy for the progress of the Regional Power Exchange with involvement of more than four member nations i.e. beyond BBIN

Lack of Open Access Regulation across Member Nations

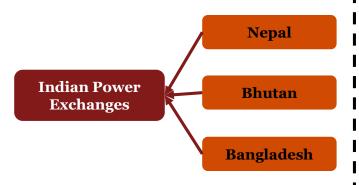

Way Ahead

- Development of a comprehensive roadmap for the phase wise transition of the bilateral trade to trilateral and conclusively multilateral trade system
- Development of a robust strategy for inclusion of nearly all the member nations to the PXs platform
- Development of planning for the adoption of open access regime by all member nations

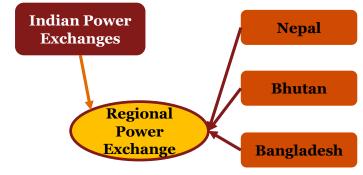

Regional Power Market Potential Regional Power Exchange PXs offers a platform for multilateral Cross Border Electricity Trade facilitating an opportunity to **Option** leverage the generation of generation assets across SAARC Region Considering the electricity demand has diversity on seasonal, Value monthly, weekly and even daily level, PXs can play a transformational role to provide electricity at a fair, transparent **Proposition** and neutral platform with competitive price discovery Progressive regional power market initiatives to drive regional Regional power market growth viz. Bangladesh having green power (hydro) Driver power import from Bhutan-Nepal, trilateral power agreements (Bhutan-India-Nepal) etc. In the SAARC region, India is currently playing a catalytic role by taking preliminary steps towards the development of Regional **Progress** Power Exchange. Introduction RTM market and establishing rules and regulations allowing participation of other SA nations.

Potential Options of the Cross Border Trade of Electricity (CBTE) in SAARC Region

Option 1: Extend operations of established Power Exchanges in India

Option 2: Set-up Regional Power Exchange

- Create separate bid area for each SAARC
 Member nation or include member nations
 in nearby existing bid area depending upon
 technical feasibility
- To begin with, include member nations having existing grid connectivity;
- Subsequently add other members as and when they get connected with Indian grid

- Creation of a Regional Power exchange viz. Regional PXs where South Asian Nations can participate
- Regional PXs can receive bids from member nations and, depending upon technical feasibility, it can receive either separate direct bids from Indian sellers and buyers or only uncleared buy bids and sell bids from Indian PXs

Proactive Initiatives to facilitate CBTE

MoP Guidelines for Import/Export (Cross Border) of Electricity (2018)

- Import/export of electricity between India and neighboring countries possible through bilateral agreement, bidding route or mutual agreement route.
- Import/Export through bilateral agreement between two countries, the Government of India may designate an Entity for import/export of power
- Disputes involving multiple Entities of separate countries can be settled through the International Arbitration Centre

CEA Draft Conduct of Business Rules of Designated Authority for CBTE (2019)

- Indian entities trading in DAM in PXs will not require any approval from designated authority
- Approval from designated authority not necessary if import/export is taking place under the Inter Govt. Agreement signed by India and neighboring country for specific projects

CERC Cross Border Trade of Electricity Regulations, 2019

- Sale and purchase of power between India and neighbouring countries allowed under bilateral agreement, bidding route or mutual agreement
- Electricity trading licensee of India may trade in Indian PXs on behalf of entity of the SA nation by obtaining approval from MoP designated agency

Conclusion

Conclusion and Way forward

Transitioning from
Bilateral to Trilateral and
conclusively to Multilateral
CBET in South Asian
Region

Deepening CBET leads to Clean Energy Transition and Sustainability, Climate Change Mitigation Focus on power market development including ancillary services (establishment of regional PX)

De-risking CBET infrastructure Projects, Enhancing Bankability of Projects, Investment Mobilisation

Need to strengthen the process of Policy and Regulatory Harmonisation and Institutional Capacity

Thank you
