

Digitalization and Electricity Monitoring

Hu Bo

Top10 China

9 December 2021

Profile

- Researcher
 - Motor system energy efficiency
 - Appliance energy efficiency standards and labels
 - Cooling efficiency
 - Industrial IoT standardization
- **Programmer**
 - Embedded device and system
 - IoT cloud OPC UA server
 - Web application
 - Web crawling
- Coordinator
 - International cooperation
 - Technology transfer

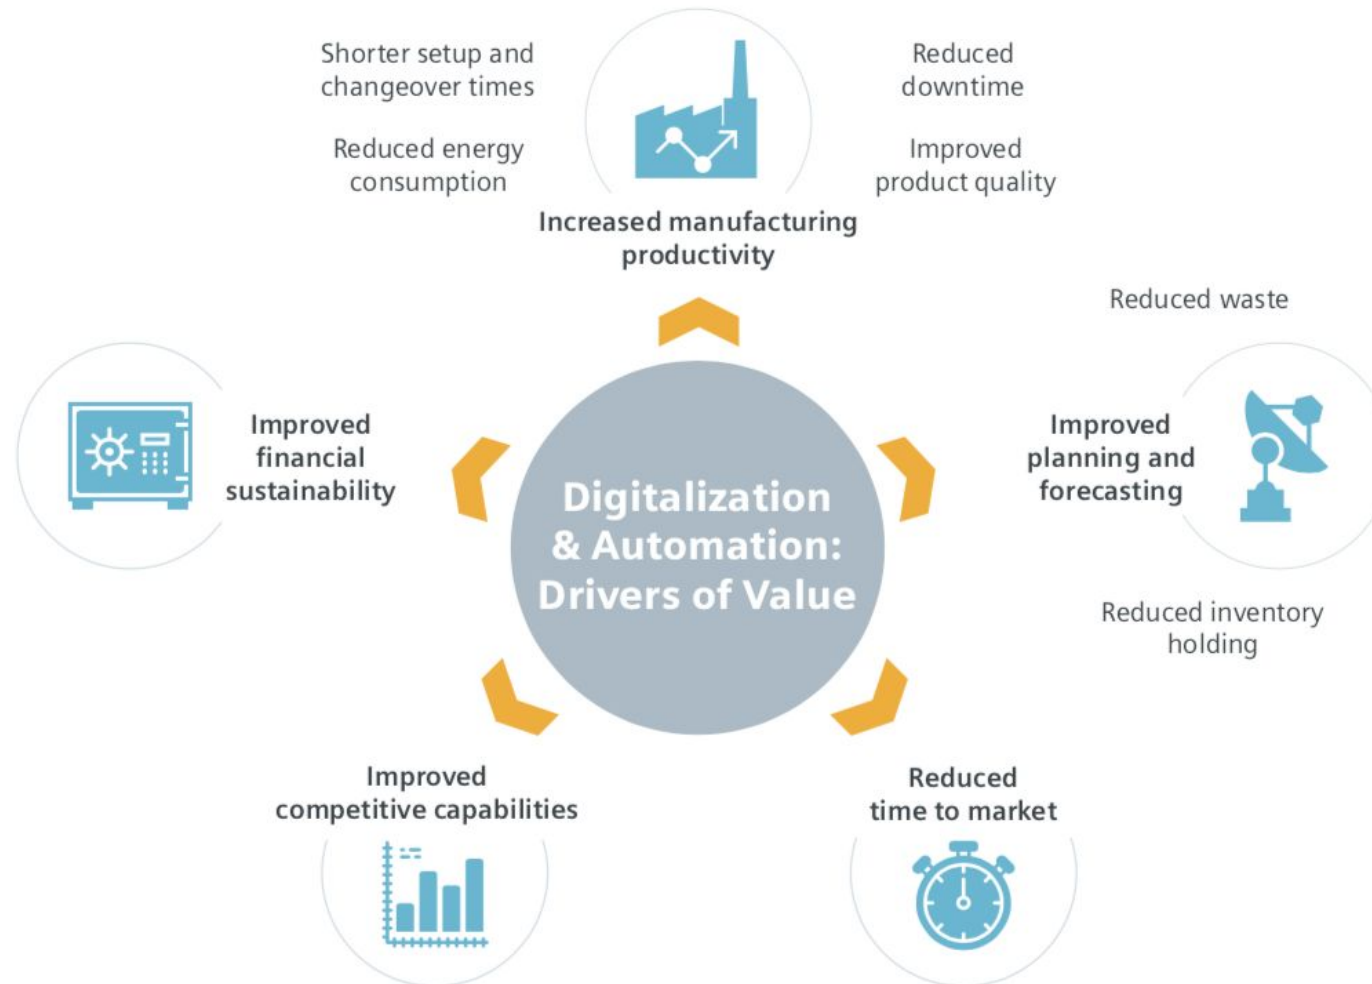

Table of content

- Why is digitalization needed?
- What is digitalization?
- How to do digitalization?
- Cases
 - Environment monitoring
 - Electricity monitoring
 - Smart pump system
 - Smart watering
 -

Why digitalization? - benefits

1. Reduces costs
2. Decentralizes production
3. **Enhances efficiency and productivity**
4. Creates new business opportunities
5. Accelerates reaction to demand trends
6. Fosters competitive advantage
7. Stimulates innovation against disruption
8. Boosts internal cohesion
9. Improves use of data capacity
10. Bring new talent's interest

Why digitalization? - benefits

Why digitalization? – benefits for motor systems

1. Improve efficiency
2. Energy performance audit
3. Predictive maintenance
4. System re-design & re-size

What is digitalization? – terms and definitions

- **Digitalization** is the process in which aspects of social life are restructured around digital communication.
- **Digitization** is the process of converting information into a digital (i.e. computer-readable) format. The result is the representation of an **object**, image, sound, document or **signal (usually an analog signal)** by generating a series of numbers that describe a discrete set of points or samples.
- **Digital Transformation**: refers to a company adopting a digital technology.

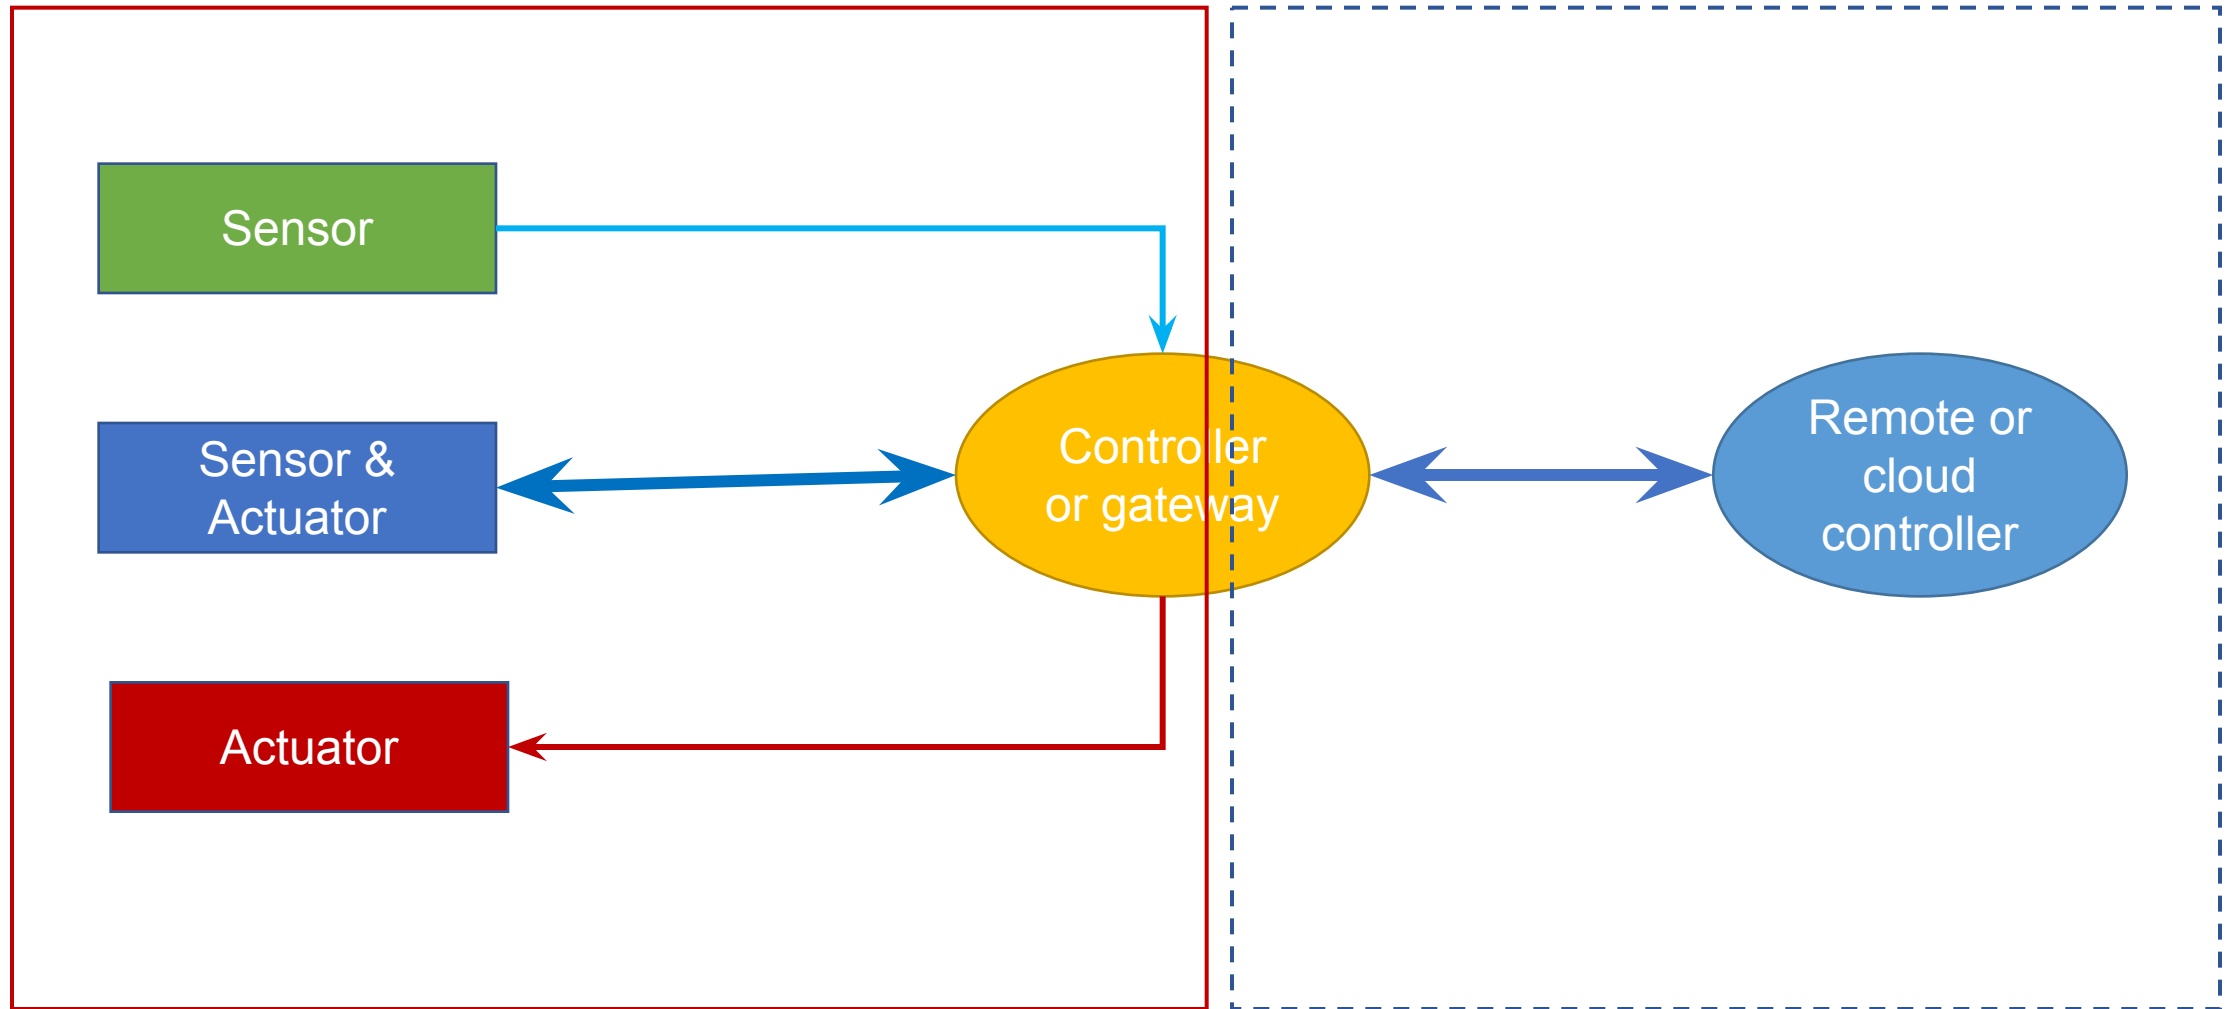

What do we want to sense?

- Environment
 - Air quality: PM2.5, PM10, air pressure, NO_x, SO_x, O₃, CO₂
 - Water quality: BOD, COD, turbidity
 - Temperature & humidity
 - Hazardous gas: TVOC, CH₂O, etc
 - Soil: wetness, turbidity
- Energy
 - Electricity: power, voltage, current, power factor
 - Liquid: quantity, velocity, pressure
 - Air flow: quantity, velocity, pressure
- Others
 - Rotating speed
 - Vibration
 - Lighting brightness
 - Thermal

What do we want to control?

- Operation on and off
 - Motor
 - Power system
- Speed
 - Voltage and current
 - Frequency
- Status
 - Valve opening rate
 - Damper opening rate
 - System operation configuration

How do we sense and control?

Level 1 sense : traditional meters

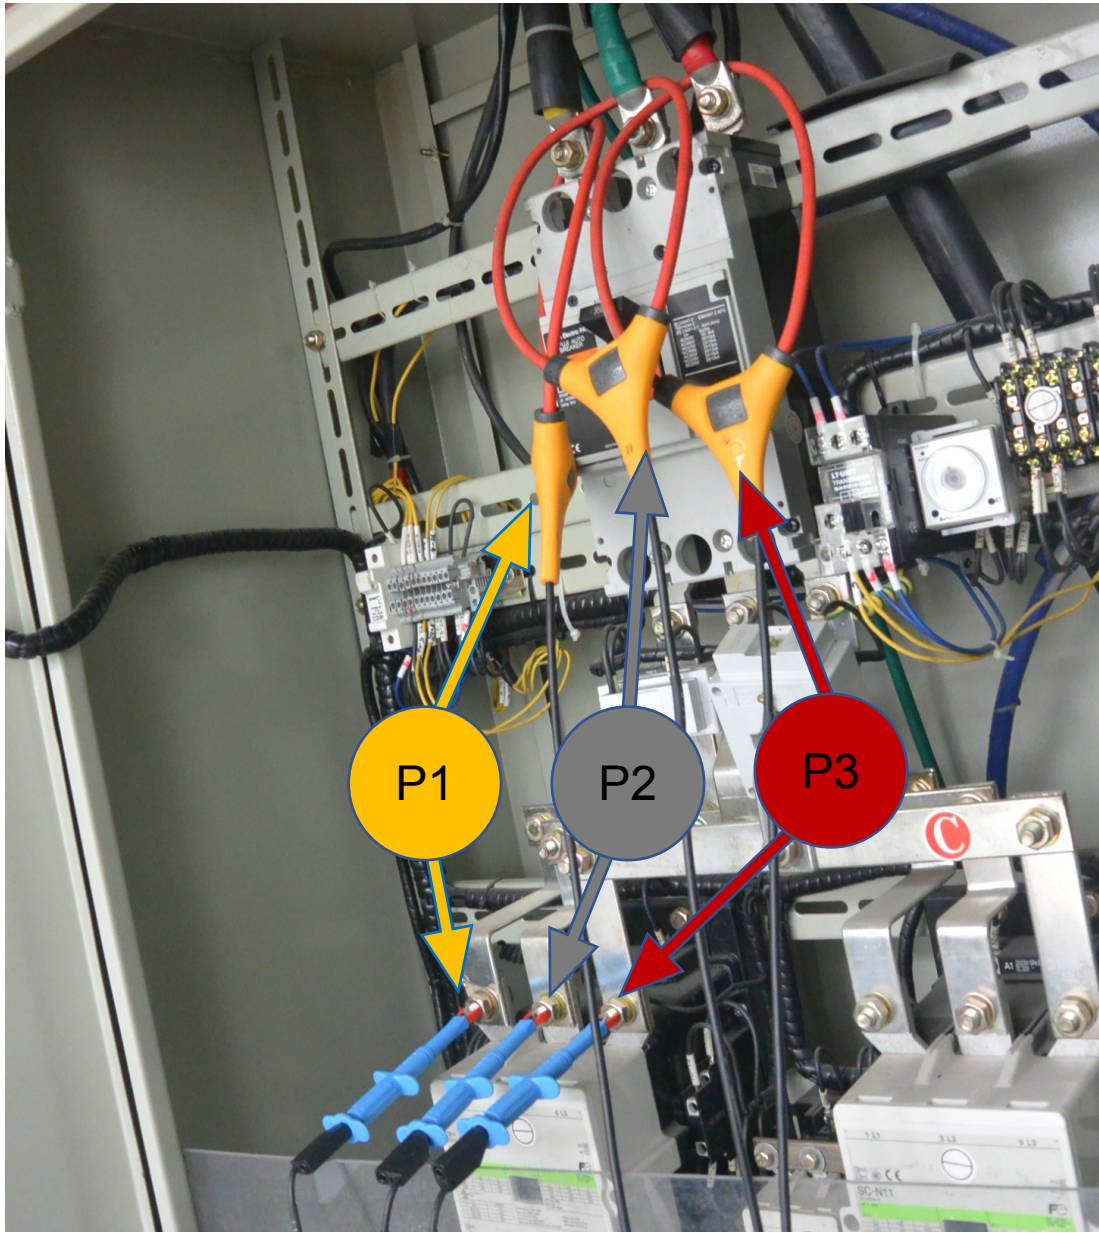

Level 2 sense : digital meters

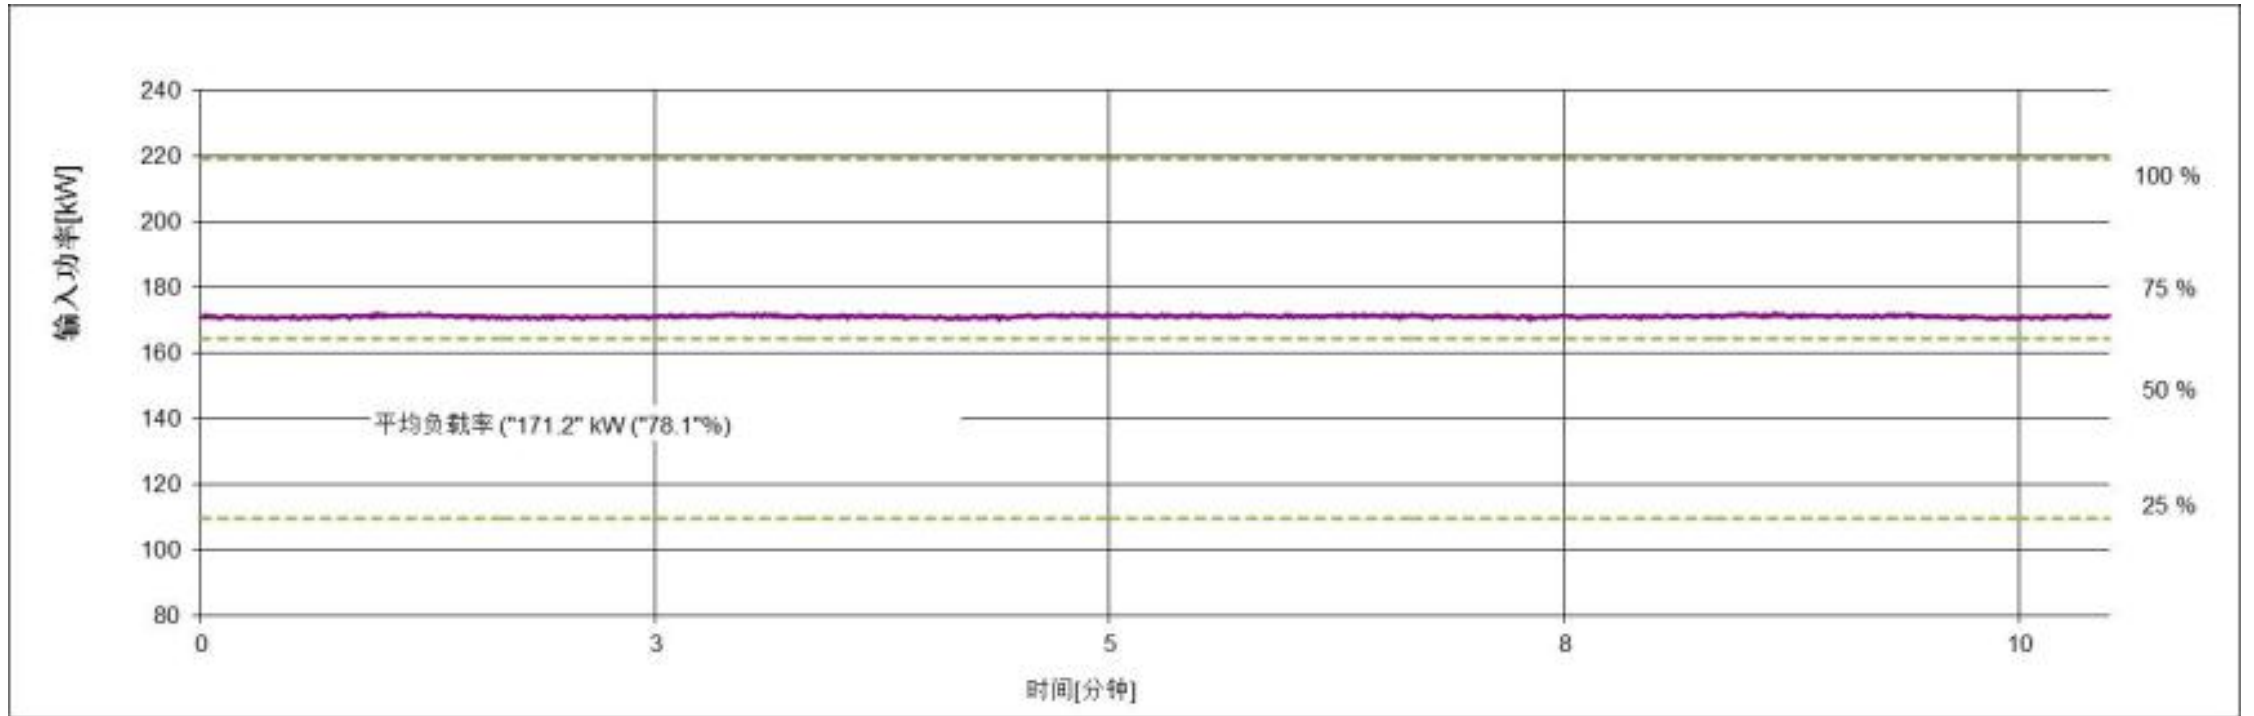

Level 3 sense: external digital meter

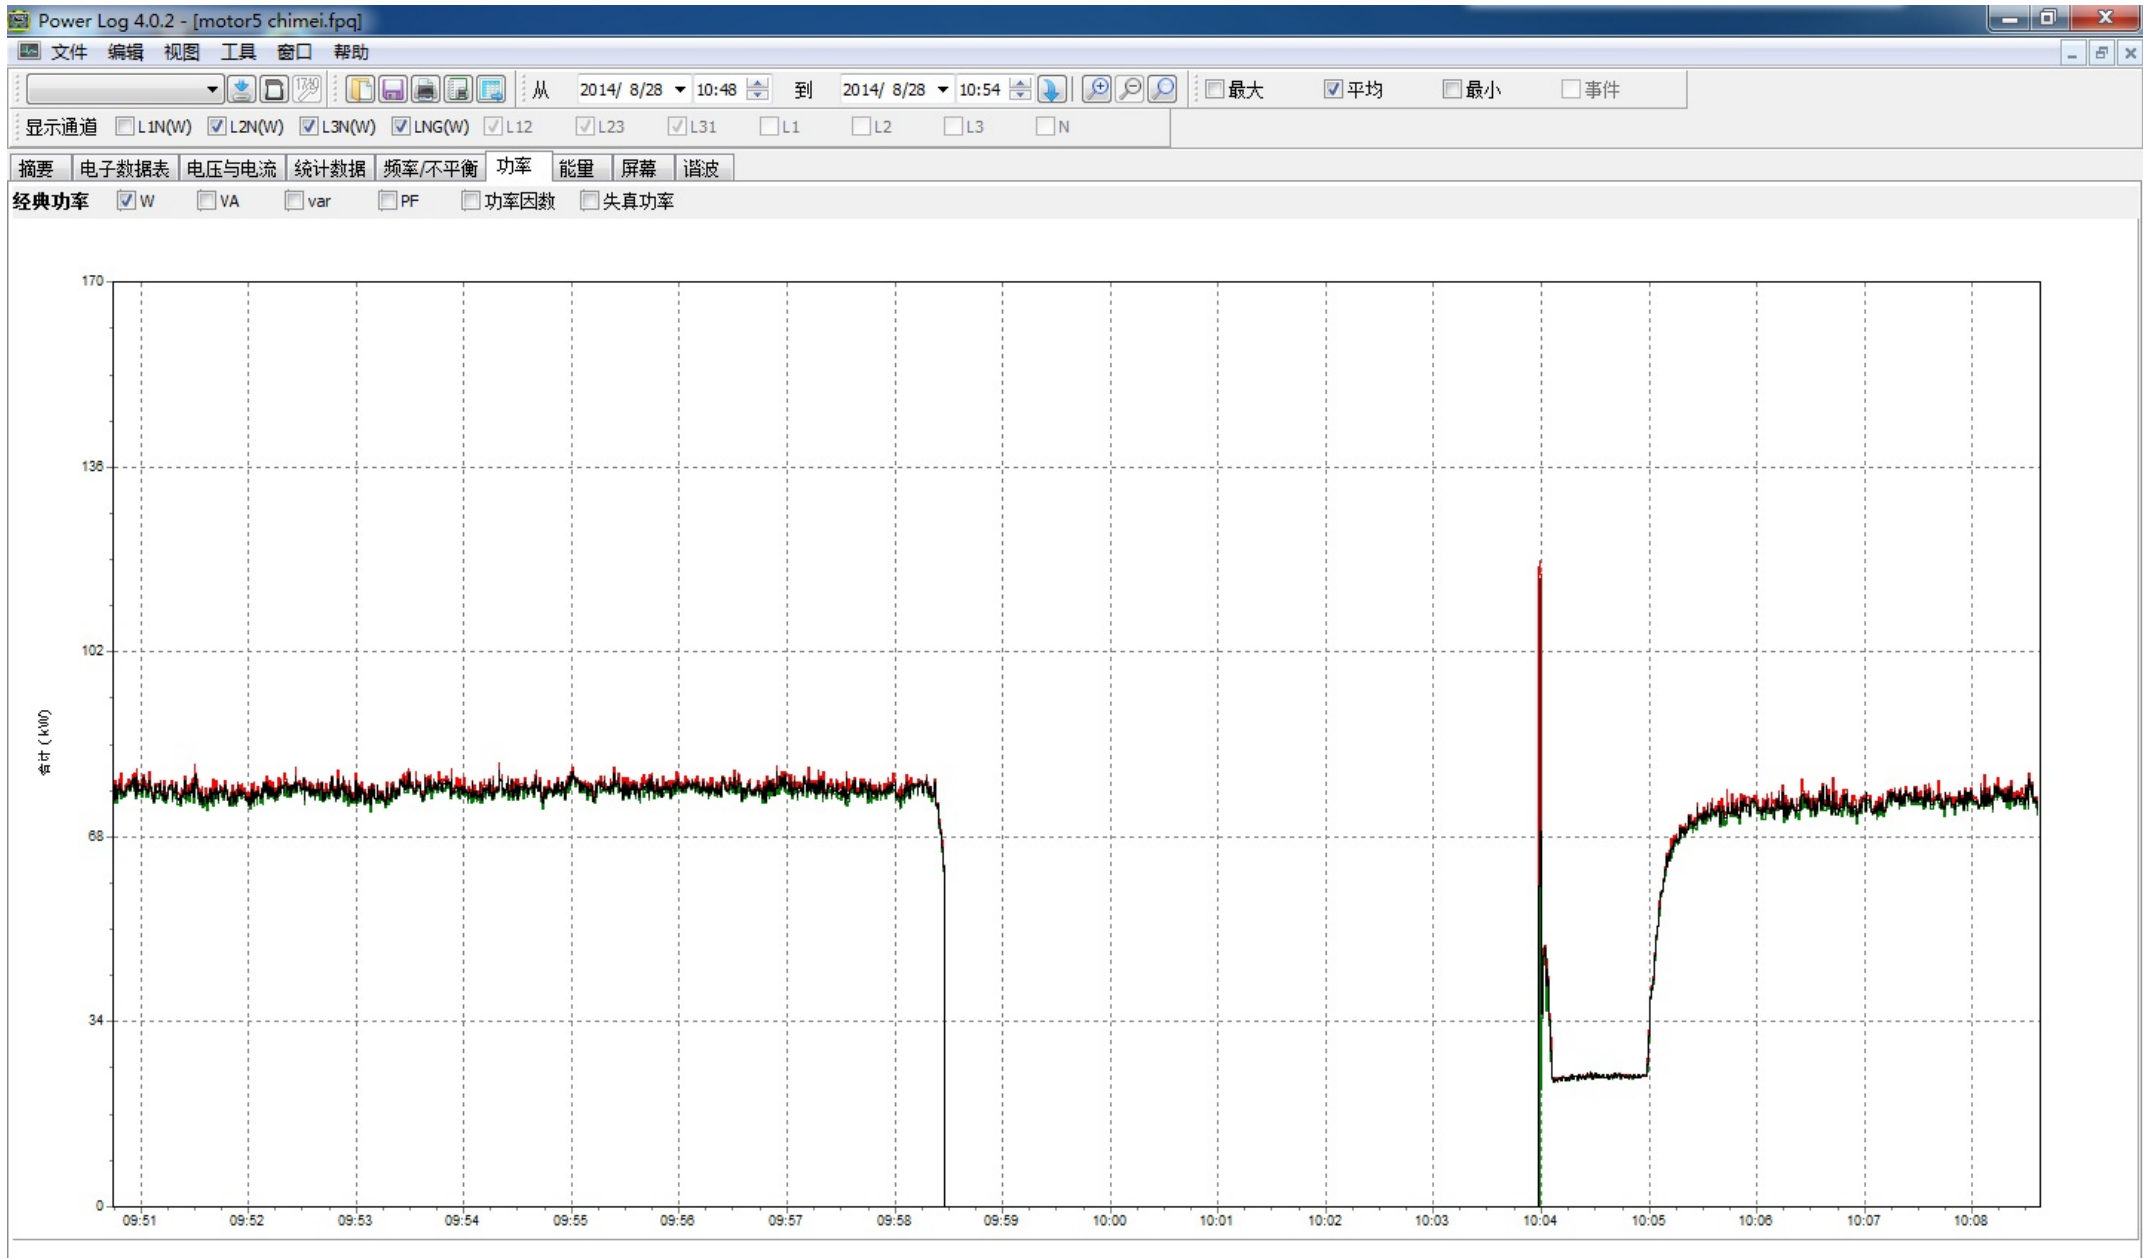

Case: pump system operation

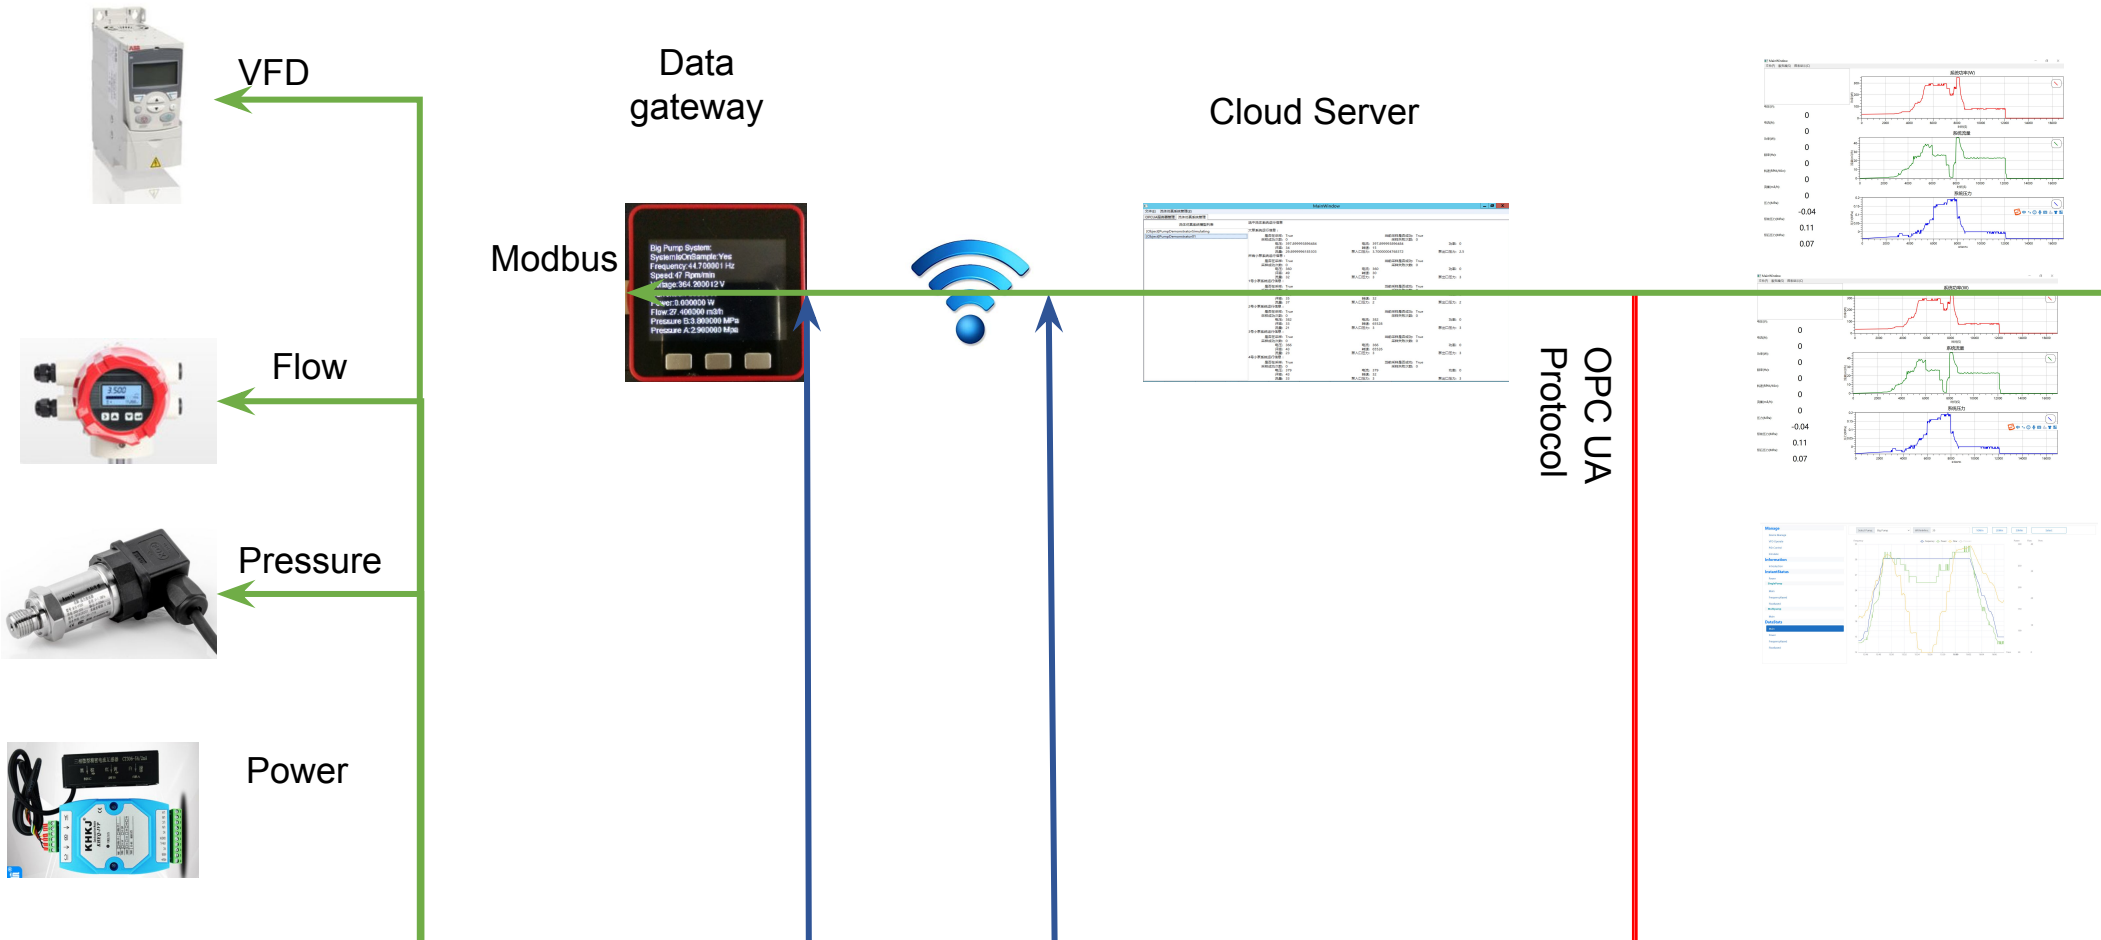

Case: air compressor system operation

Level 4 sense: sample, show and transmission

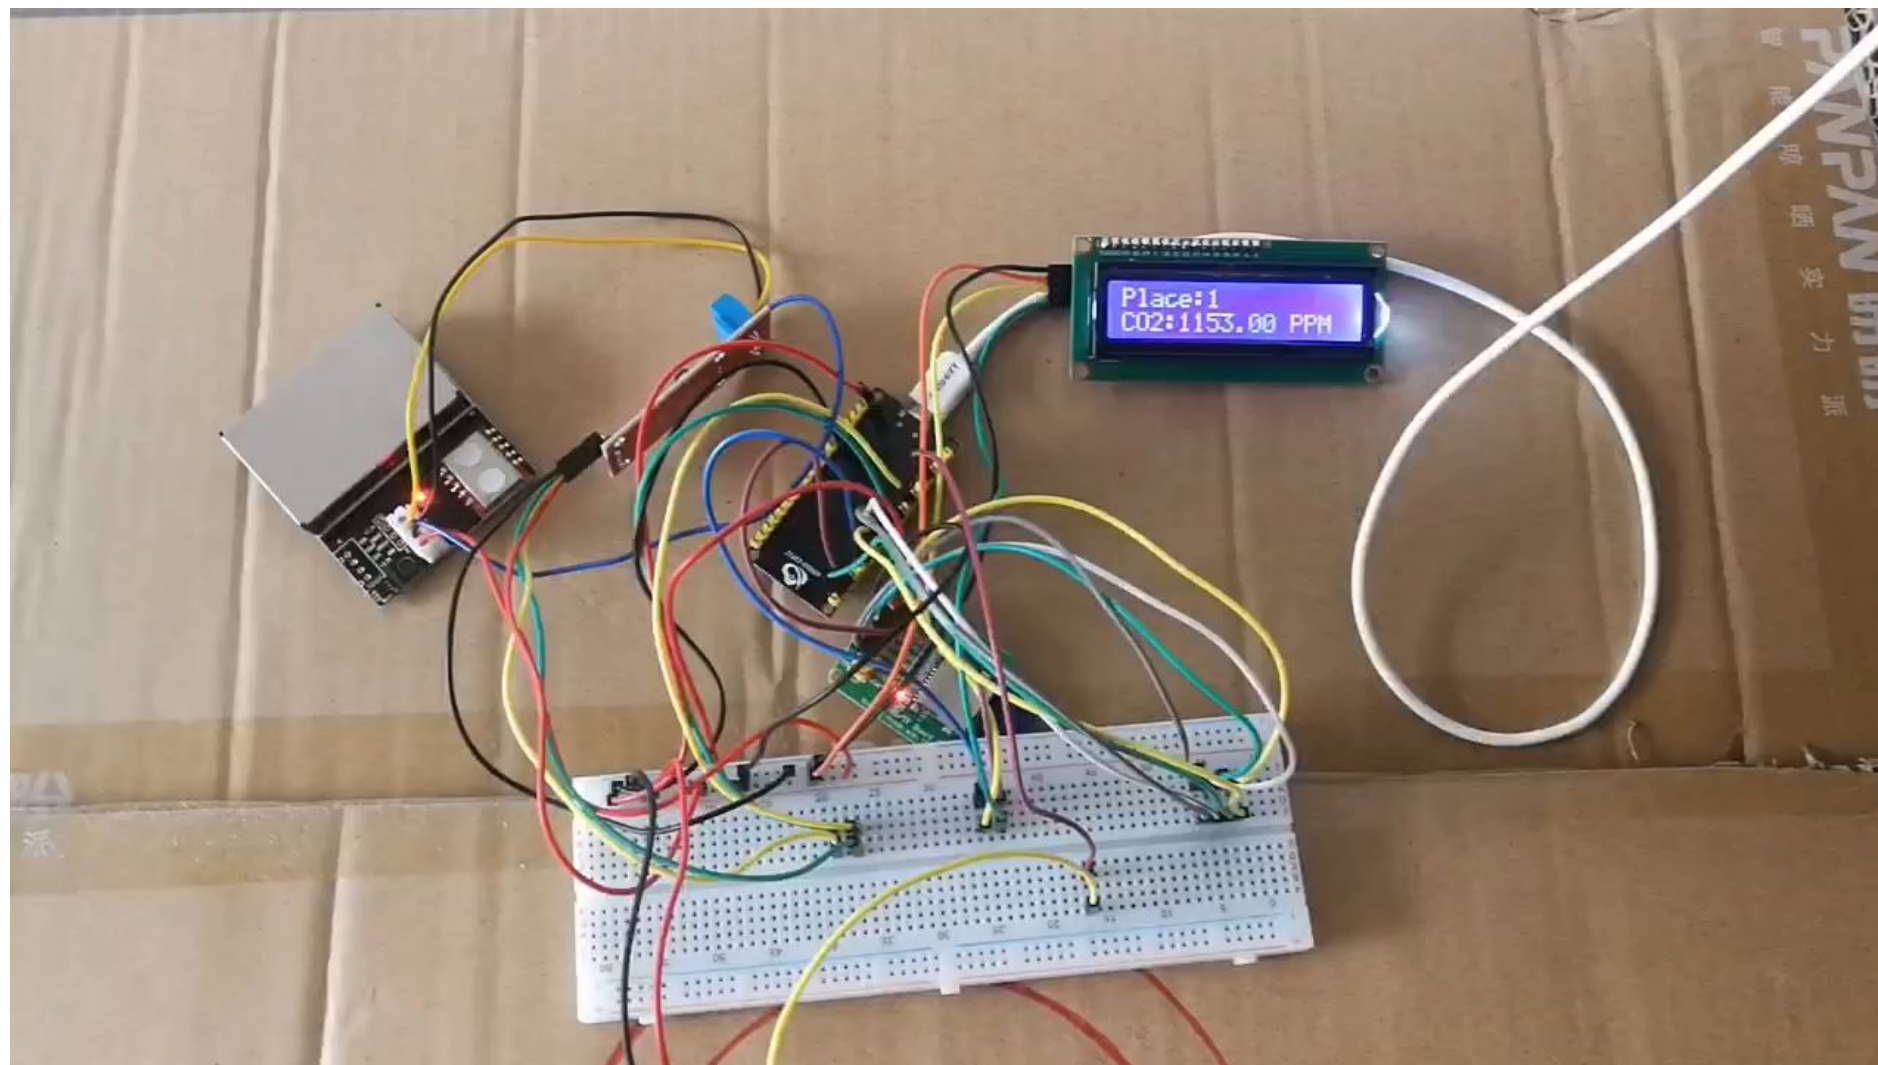

Smart sensors and meters

Graphical, dynamical clients

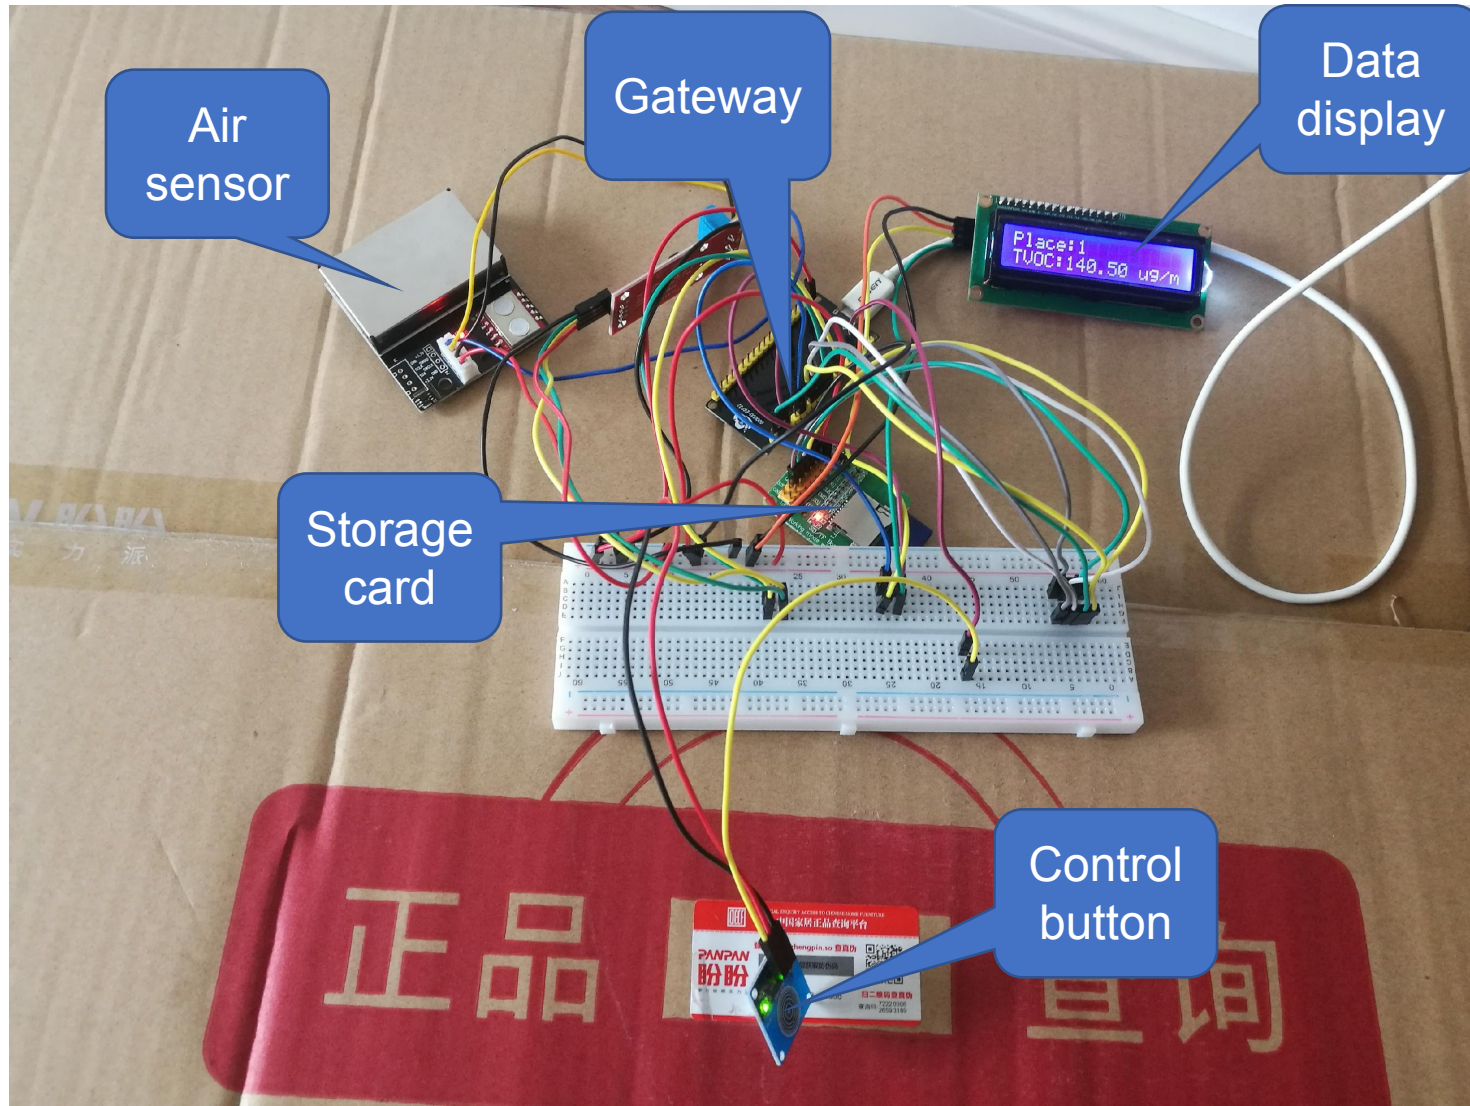

Innovative sensors

How to start? - Arduino

The screenshot displays the Arduino Project Hub interface. At the top, there's a navigation bar with a 'PROJECT HUB' logo, an 'ADD PROJECT' button, a search bar labeled 'SEARCH PROJECTS', and a 'SIGN IN' link. Below this, a filter bar includes dropdown menus for 'All products', 'Sensors & Environ...', 'Trending', 'Any difficulty', and 'Any type'. The main content area is titled 'SENSORS & ENVIRONMENT' and features a grid of project cards. Each card includes a project image, a title, the creator's name, and engagement statistics (views, comments, respects).

Disadvantage of digitalization

- Extra development and deployment cost
- Extra system maintenance cost
- Engineering training and using
- How to extra the knowledge from the data?

Thank You !
